

# Edge D-Arm Box

Dual protection mechanism for boxed merchandise and no cables to wind!

Edge D-Arm Box Tag attaches to boxes of almost any shape and size using innovative single-use sleds: with conductive tape, adhesive pads or existing nylon straps found on some packaging.

Edge D-Arm Box Tag uses a dual protection mechanism, which requires a magnetic detacher AND a standard deactivator pad to remove. Those who try to defeat the tag with an illegal detacher will be very surprised by its loud 95 dB alarm!

For your employees removal is a snap, and no additional training or equipment is needed as the tag works with your existing detachers and deactivators.
